## A level Chemistry Transition task

As you are choosing to take A level chemistry, you will need to ensure you are prepared to hit the ground running when it comes to the content.

As such, we have provided a transition pack below, which we expect you to use to brush up on your chemistry skills before the start of the academic year.

In addition to this, you will need to complete a Transition Task, by Friday, $\mathbf{9}^{\text {th }}$ September.
This is on a Microsoft Forms quiz.
If you are an external student and do not yet know your admission number, please leave that option blank in the quiz. If you are an internal student, your admission number is the same as the number you use to log in to school computers.

The link to the quiz is: Microsoft Forms

## https://forms.office.com/pages/responsepage.aspx?id= vAJyjTAkEWTigToan3Iz5NGbPL6fwNAt6KX-qE445IUNjdQNkdPMFhKVOJPSk9LMTdINUI1MkpaMy4u\&web=1\&wdLOR=c1B38A18C-B8B7-41D9-B3FF-89F87683372B

Please be aware: You cannot start entering answers, save your progress, and come back to where you were before on Microsoft Forms. This means that if you want to do the quiz over a few sittings, you will need to save your answers in a separate document before pasting them in one go to submit.

## Do not forget to use appropriate superscripts and subscripts.

If you have any questions about this, you can email Miss Morcom at emorcom@heathland.hounslow.sch.uk.

Good luck with the quiz, and we look forward to seeing you in September!

## Transition Pack for A Level Chemistry

Get ready for A-level!<br>A guide to help you get ready for A-level Chemistry, including everything from topic guides to days out and online learning courses.

Commissioned by The PiXL Club Ltd. February 2016
© Copyright The PiXL Club Ltd, 2016

Please note: these resources are non-board specific. Please direct your students to the specifics of where this knowledge and skills most apply.
partners in excellence

## So yoy are considering A Lexel Chemistry?

This pack contains a programme of activities and resources to prepare you to start an A level in Chemistry in September. It is aimed to be used after you complete your GCSE, throughout the remainder of the summer term and over the Summer Holidays to ensure you are ready to start your course in September.
partners in excellence

## Book Recommendations

Periodic Tales: The Curious Lives of the Elements (Paperback) Hugh Aldersey-Williams

ISBN-10: 0141041455
http://bit.ly/pixlchembook1

This book covers the chemical elements, where they come from and how they are used. There are loads of fascinating insights into uses for chemicals you would have never even thought about.

The Science of Everyday Life: Why Teapots Dribble, Toast Burns and Light Bulbs Shine (Hardback) Marty Jopson

ISBN-10: 1782434186
http://bit.ly/pixlchembook2

The title says it all really, lots of interesting stuff about the things around you home!

Bad Science (Paperback) Ben Goldacre

ISBN-10: 000728487X

## http://bit.ly/pixlchembook3

Here Ben Goldacre takes apart anyone who published bad / misleading or dodgy science - this book will make you think about everything the advertising industry tries to sell you by making it sound 'sciency'.

Calculations in AS/A Level Chemistry (Paperback) Jim Clark

ISBN-10: 0582411270
http://bit.ly/pixlchembook4
If you struggle with the calculations side of chemistry, this is the book for you. Covers all the possible calculations you are ever likely to come across. Brought to you by the same guy who wrote the excellent chemguide.co.uk website.

## Salters' Advanced Chemistry: Chemical Storylines

Do not feel you need to buy the latest edition (unless you are doing Salters chemistry!) You can pick up an old edition for a few pounds on ebay, gives you a real insight into how chemistry is used to solve everyday problems from global pollution through feeding to world to making new medicines to treat disease.
partners in excellence

## Videos to watch online

## Rough science - the Open University - 34 episodes available

Real scientists are 'stranded' on an island and are given scientific problems to solve using only what they can find on the island.

Great fun if you like to see how science is used in solving problems.
There are six series in total
http://bit.ly/pixlchemvid1a
http://www.dailymotion.com/playlist/x2igiq Rough-Science rough-science-full-series/1\#video=xxw6pr
or
http://bit.ly/pixlchemvid1b
https://www.youtube.com/watch?v=|UoDWAt259|
A thread of quicksilver - The Open University
A brilliant history of the most mysterious of elements - mercury. This program shows you how a single substance led to empires and war, as well as showing you come of the cooler properties of mercury.
http://bit.ly/pixlchemvid2
https://www.youtube.com/watch?v=t46lvTxHHTA
10 weird and wonderful chemical reactions
10 good demonstration reactions, can you work out the chemistry of .... any... of them?
http://bit.ly/pixlchemvid3
https://www.youtube.com/watch?v=0Bt6RPP2ANI

## Chemistry in the Movies

Dantes Peak 1997: Volcano disaster movie.
Use the link to look at the Science of acids and how this links to the movie.
http://www.open.edu/openlearn/science-maths-technology/science/chemistry/dantes-peak
http://www.flickclip.com/flicks/dantespeak1.html
http://www.flickclip.com/flicks/dantespeak5.html
Fantastic 42005 \&2015: Superhero movie

Michio Kaku explains the "real" science behind fantastic four http://nerdist.com/michio-kaku-explains-the-real-science-behind-fantastic-four/
http://www.flickclip.com/flicks/fantastic4.html
partners in excellence

## Research activities

Use your online searching abilities to see if you can find out as much about the topic as you can. Remember it you are a prospective A level chemist, you should aim to push your knowledge.

## You can make a 1-page summary for each one you research using Cornell notes:

http://coe.jmu.edu/learningtoolbox/cornellnotes.html

## Task 1: The chemistry of fireworks

What are the component parts of fireworks? What chemical compounds cause fireworks to explode? What chemical compounds are responsible for the colour of fireworks?

Task 2: Why is copper sulfate blue?
Copper compounds like many of the transition metal compounds have got vivid and distinctive colours - but why?

## Task 3: Aspirin

What was the history of the discovery of aspirin, how do we manufacture aspirin in a modern chemical process?

Task 4: The hole in the ozone layer
Why did we get a hole in the ozone layer? What chemicals were responsible for it? Why were we producing so many of these chemicals? What is the chemistry behind the ozone destruction?

## Task 5: ITO and the future of touch screen devices

ITO - indium tin oxide is the main component of touch screen in phones and tablets. The element indium is a rare element and we are rapidly running out of it. Chemists are desperately trying to find a more readily available replacement for it. What advances have chemists made in finding a replacement for it?

Figure 1: http://coe.jmu.edu/learningtoolbox/images/noteb4.gif
partners in excellence

## Pre-Knowledge Topics

## Chemistry topic 1 - Electronic structure, how electrons are arranged around the nucleus

A periodic table can give you the proton / atomic number of an element, this also tells you how many electrons are in the atom.

## You will have used the rule of electrons shell filling, where:

The first shell holds up to 2 electrons, the second up to 8 , the third up to 8 and the fourth up to 18 (or you may have been told 8).

The 'shells' can be broken down into 'orbitals', which are given letters:'s' orbitals, ' $p$ ' orbitals and ' $d$ ' orbitals.
You can read about orbitals here:
http://bit.ly/pixlchem1
http://www.chemguide.co.uk/atoms/properties/atomorbs.html\#top

Now that you are familiar with s, p and d orbitals try these problems, write your answer in the format:
$1 s^{2}, 2 s^{2}, 2 p^{6}$ etc.
Q1.1 Write out the electron configuration of:
a) Ca
b) Al
c) S
d) Cl
e) Ar
f) Fe
g) V
h) Ni
i) Cu
j) Zn
k) As

Q1.2 Extension question, can you write out the electron arrangement of the following ions:
a) $\mathrm{K}^{+}$
b) $\mathrm{O}^{2-}$
c) $\mathrm{Zn}^{2+}$
d) $\mathrm{V}^{5+}$
e) $\mathrm{Co}^{2+}$

## Chemistry topic 2 - Oxidation and reduction

At GCSE you know that oxidation is adding oxygen to an atom or molecule and that reduction is removing oxygen, or that oxidation is removing hydrogen and reduction is adding hydrogen. You may have also learned that oxidation is removing electrons and reduction is adding electrons.

At A level we use the idea of oxidation number a lot!
You know that the metals in group 1 react to form ions that are +1 , i.e. $\mathrm{Na}^{+}$and that group 7 , the halogens, form -1 ions, i.e. Br -.

We say that sodium, when it has reacted has an oxidation number of +1 and that bromide has an oxidation number of -1 .

All atoms that are involved in a reaction can be given an oxidation number.
partners in excellence

An element, Na or $\mathrm{O}_{2}$ is always given an oxidation state of zero (0), any element that has reacted has an oxidation state of + or -.

As removing electrons is reduction, if, in a reaction the element becomes more negative it has been reduced, if it becomes more positive it has been oxidised.
-5
0
+5

You can read about the rules for assigning oxidation numbers here:
http://www.dummies.com/how-to/content/rules-for-assigning-oxidation-numbers-to-elements.html

Elements that you expect to have a specific oxidation state actually have different states, so for example you would expect chlorine to be -1, it can have many oxidation states: NaClO , in this compound it has an oxidation state of +1

There are a few simple rules to remember:
Metals have a + oxidation state when they react.
Oxygen is 'king' it always has an oxidation state of -2
Hydrogen has an oxidation state of +1 (except metal hydrides)
The charges in a molecule must cancel.

Examples: Sodium nitrate, $\mathrm{NaNO}_{3}$

| $\mathrm{Na}+1$ | $3 \mathrm{XO}^{2-}$ |
| :--- | :--- |
| +1 | -6 |

To cancel:

$$
N=+5
$$

sulfate ion, $\mathrm{SO}_{4}{ }^{2-}$

Q2.1 Work out the oxidation state of the underlined atom in the following
a) $\mathrm{MgCO}_{3}$
b) $\mathrm{SO}_{3}$
c) $\mathrm{NaClO}_{3}$
d) $\mathrm{MnO}_{2}$
e) $\mathrm{Fe}_{2} \mathrm{O}_{3}$
f) $\underline{\mathrm{V}}_{2} \mathrm{O}_{5}$
g) $\mathrm{KMnO}_{4}$
h) $\mathrm{Cr}_{2} \mathrm{O}_{7}{ }^{2-}$
i) $\mathrm{Cl}_{2} \mathrm{O}_{4}$

## Chemistry topic 3 - Isotopes and mass

You will remember that an isotopes are elements that have differing numbers of neutrons. Hydrogen has 3 isotopes; $H_{1}^{1} \quad H_{1}^{2} \quad H_{1}^{3}$

Isotopes occur naturally, so in a sample of an element you will have a mixture of these isotopes. We can accurately measure the amount of an isotope using a mass spectrometer. You will need to understand what a mass spectrometer is and how it works at A level. You can read about a mass spectrometer here:
partners in excellence

http://bit.ly/pixlchem3
http://www.kore.co.uk/tutorial.htm
http://bit.ly/pixlchem4
http://filestore.aqa.org.uk/resources/chemistry/AQA-7404-7405-TN-MASS-SPECTROMETRY.PDF

Q3.1 What must happen to the atoms before they are accelerated in the mass spectrometer?
Q3.2 Explain why the different isotopes travel at different speeds in a mass spectrometer.
A mass spectrum for the element chlorine will give a spectrum like this:

## http://www.avogadro.co.uk/definitions/ar.htm

An A level periodic table has the masses of elements recorded much more accurately than at GCSE. Most elements have isotopes and these have been recorded using mass spectrometers.

GCSE

| $\begin{gathered} 11 \\ \mathbf{B} \\ \text { boon } \\ 5 \end{gathered}$ | $\begin{gathered} 12 \\ \mathbf{c} \\ \text { carton } \\ 6 \end{gathered}$ | $\begin{gathered} 14 \\ \mathbf{N} \\ \text { nitrogen } \\ 7 \end{gathered}$ | $\begin{gathered} 16 \\ 0 \\ 0 \\ \text { oxyen } \\ 8 \end{gathered}$ | $\begin{gathered} 19 \\ \mathbf{F} \\ \text { fuorine } \\ 9 \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| 27 | 28 | 31 | 32 | 35.5 |
| Al | Si | P | S | Cl |
| uminum | silcon | phosphorus | sultur | chorine |
| 13 | 14 | 15 | 16 | 17 |

A level

| boron | 12.0 <br> carbon | ${ }_{7}^{14.0} \mathrm{~N}$ | 16.0 <br> oxygen | ${ }_{9}^{19.0}{ }^{5}$ <br> fluorine |
| :---: | :---: | :---: | :---: | :---: |
| ${ }_{13}^{27.0} \mathrm{Al}$ <br> aluminium | ${ }_{14}^{28.1}$ |  | $32.1$ <br> 16 <br> sulphur | ${ }_{\substack{17 \\ \text { chlorine }}}^{35.5}$ |

Given the percentage of each isotope you can calculate the mean mass which is the accurate atomic mass for that element.

Q3.3 Use the percentages of each isotope to calculate the accurate atomic mass of the following elements.
a) Antimony has 2 isotopes: $\mathrm{Sb}-12157.25 \%$ and $\mathrm{Sb}-12342.75 \%$
b) Gallium has 2 isotopes: Ga-69 60.2\% and Ga-71 39.8\%
c) Silver has 2 isotopes: Ag-107 51.35\% and Ag-109 48.65\%
d) Thallium has 2 isotopes: $\mathrm{TI}-20329.5 \%$ and $\mathrm{TI}-20570.5 \%$
e) Strontium has 4 isotopes: $\mathrm{Sr}-84$ 0.56\%, $\mathrm{Sr}-86$ 9.86\%, $\mathrm{Sr}-87$ 7.02\% and $\mathrm{Sr}-8882.56 \%$
partners in excellence

Chemistry topic 4 - The shapes of molecules and bonding. Have you ever wondered why your teacher drew a water molecule like this? The lines represent a covalent bond, but why draw them at an unusual angle? If you are unsure about covalent bonding, read about it here:

## http://bit.ly/pixlchem5

http://www.chemguide.co.uk/atoms/bonding/covalent.html\#top

At A level you are also expected to know how molecules have certain shapes and why they are the shape they are.

You can read about shapes of molecules here:
http://bit.ly/pixlchem6
http://www.chemguide.co.uk/atoms/bonding/shapes.html\#top
Q4.1 Draw a dot and cross diagram to show the bonding in a molecule of aluminium chloride ( $\mathrm{AlCl}_{3}$ )
Q4.2 Draw a dot and cross diagram to show the bonding in a molecule of ammonia $\left(\mathrm{NH}_{3}\right)$
Q4.3 What is the shape and the bond angles in a molecule of methane $\left(\mathrm{CH}_{4}\right)$ ?

## Chemistry topic 5 - Chemical equations

Balancing chemical equations is the stepping stone to using equations to calculate masses in chemistry.
There are loads of websites that give ways of balancing equations and lots of exercises in balancing.
Some of the equations to balance may involve strange chemical, don't worry about that, the key idea is to get balancing right.
http://bit.ly/pixlchem7
http://www.chemteam.info/Equations/Balance-Equation.html

This website has a download; it is safe to do so:

http://bit.ly/pixlchem8
https://phet.colorado.edu/en/simulation/balancing-chemical-equations

Q5.1 Balance the following equations
a. $\mathrm{H}_{2}+\mathrm{O}_{2} \rightarrow \mathrm{H}_{2} \mathrm{O}$
b. $\mathrm{S}_{8}+02 \rightarrow \mathrm{SO}_{3}$
c. $\mathrm{HgO} \rightarrow \mathrm{Hg}+\mathrm{O}_{2}$
d. $\mathrm{Zn}+\mathrm{HCl} \rightarrow \quad \mathrm{ZnCl}_{2}+\mathrm{H}_{2}$
partners in excellence
e. $\mathrm{Na}+\mathrm{H}_{2} \mathrm{O} \rightarrow \mathrm{NaOH}+\mathrm{H}_{2}$
f. $\mathrm{C}_{10} \mathrm{H}_{16}+\mathrm{Cl}_{2} \rightarrow \mathrm{C}+\mathrm{HCl}$
g. $\mathrm{Fe}+\mathrm{O}_{2} \rightarrow \quad \mathrm{Fe}_{2} \mathrm{O}_{3}$
h. $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}+\mathrm{O}_{2} \rightarrow \quad \mathrm{CO}_{2}+\mathrm{H}_{2} \mathrm{O}$
i. $\mathrm{Fe}_{2} \mathrm{O}_{3}+\mathrm{H}_{2} \rightarrow \mathrm{Fe}+\mathrm{H}_{2} \mathrm{O}$
j. $\mathrm{Al}+\mathrm{FeO} \rightarrow \mathrm{Al}_{2} \mathrm{O}_{3}+\mathrm{Fe}$

## Chemistry topic 6 - Measuring chemicals - the mole

From this point on you need to be using an A level periodic table, not a GCSE one you can view one here:
http://bit.ly/pixlpertab

https://secondaryscience4all.files.wordpress.com/2014/08/filestore aqa org uk subjects aqa-2420-w-trbptds pdf.png

Now that we have our chemical equations balanced, we need to be able to use them in order to work out masses of chemicals we need or we can produce.

The mole is the chemists equivalent of a dozen, atoms are so small that we cannot count them out individually, we weigh out chemicals.

For example: magnesium + sulfur $\rightarrow$ magnesium sulfide
$\mathrm{Mg}+\mathrm{S} \rightarrow \quad \mathrm{MgS}$

We can see that one atom of magnesium will react with one atom of sulfur, if we had to weigh out the atoms we need to know how heavy each atom is.

From the periodic table: $\mathrm{Mg}=24.3$ and $\mathrm{S}=32.1$
If I weigh out exactly 24.3 g of magnesium this will be 1 mole of magnesium, if we counted how many atoms were present in this mass it would be a huge number ( $6.02 \times 10^{23}!!!!$ ), if I weigh out 32.1 g of sulfur then I would have 1 mole of sulfur atoms.

So 24.3 g of Mg will react precisely with 32.1 g of sulfur, and will make 56.4 g of magnesium sulfide.
Here is a comprehensive page on measuring moles, there are a number of descriptions, videos and practice problems.

You will find the first 6 tutorials of most use here, and problem sets 1 to 3 .

## http://bit.ly/pixlchem9

http://www.chemteam.info/Mole/Mole.html

Q6.1 Answer the following questions on moles.

a) How many moles of phosphorus pentoxide $\left(\mathrm{P}_{4} \mathrm{O}_{10}\right)$ are in 85.2 g ?
b) How many moles of potassium in 73.56 g of potassium chlorate $(\mathrm{V})\left(\mathrm{KClO}_{3}\right)$ ?
partners in excellenc
c) How many moles of water are in 249.6 g of hydrated copper sulfate( VI ) ( $\mathrm{CuSO}_{4.5} .5 \mathrm{H}_{2} \mathrm{O}$ )? For this one, you need to be aware the dot followed by $5 \mathrm{H}_{2} \mathrm{O}$ means that the molecule comes with 5 water molecules so these have to be counted in as part of the molecules mass.
d) What is the mass of 0.125 moles of tin sulfate $\left(\mathrm{SnSO}_{4}\right)$ ?
e) If I have 2.4 g of magnesium, how many g of oxygen $\left(\mathrm{O}_{2}\right)$ will I need to react completely with the magnesium? $2 \mathrm{Mg}+\mathrm{O}_{2} \rightarrow \mathrm{MgO}$

## Chemistry topic 7 - Solutions and concentrations

In chemistry a lot of the reactions we carry out involve mixing solutions rather than solids, gases or liquids.
You will have used bottles of acids in science that have labels saying 'Hydrochloric acid 1 M ', this is a solution of hydrochloric acid where 1 mole of HCl , hydrogen chloride (a gas) has been dissolved in $1 \mathrm{dm}^{3}$ of water.

The $\mathrm{dm}^{3}$ is a cubic decimetre, it is actually 1 litre, but from this point on as an $A$ level chemist you will use the $\mathrm{dm}^{3}$ as your volume measurement.
http://bit.ly/pixlchem10
http://www.docbrown.info/page04/4 73calcs11msc.htm
Q7.1

a) What is the concentration (in mol dm ${ }^{-3}$ ) of 9.53 g of magnesium chloride $\left(\mathrm{MgCl}_{2}\right)$ dissolved in $100 \mathrm{~cm}^{3}$ of water?
b) What is the concentration (in mol dm ${ }^{-3}$ ) of 13.248 g of lead nitrate $\left(\mathrm{Pb}\left(\mathrm{NO}_{3}\right)_{2}\right)$ dissolved in $2 \mathrm{dm}^{3}$ of water?
c) If I add $100 \mathrm{~cm}^{3}$ of $1.00 \mathrm{~mol} \mathrm{dm}^{3} \mathrm{HCl}$ to $1.9 \mathrm{dm}^{3}$ of water, what is the molarity of the new solution?
d) What mass of silver is present in $100 \mathrm{~cm}^{3}$ of $1 \mathrm{moldm}^{-3}$ silver nitrate $\left(\mathrm{AgNO}_{3}\right)$ ?
e) The Dead Sea, between Jordan and Israel, contains 0.0526 moldm $^{-3}$ of Bromide ions ( $\mathrm{Br}^{-}$), what mass of bromine is in $1 \mathrm{dm}^{3}$ of Dead Sea water?

## Chemistry topic 8 - Titrations

One key skill in A level chemistry is the ability to carry out accurate titrations, you may well have carried out a titration at GCSE, at A level you will have to carry them out very precisely and be able to describe in detail how to carry out a titration - there will be questions on the exam paper about how to carry out practical procedures.

You can read about how to carry out a titration here, the next page in the series (page 5) describes how to work out the concentration of the unknown.
http://bit.ly/pixlchem11

http://www.bbc.co.uk/schools/gcsebitesize/science/triple aqa/further analysis/analysing substances/revisio n/4/

Remember for any titration calculation you need to have a balanced symbol equation; this will tell you the ratio in which the chemicals react.
E.g. a titration of an unknown sample of sulfuric acid with sodium hydroxide.
partners in excellence

A $25.00 \mathrm{~cm}^{3}$ sample of the unknown sulfuric acid was titrated with $0.100 \mathrm{moldm}^{-3}$ sodium hydroxide and required exactly $27.40 \mathrm{~cm}^{3}$ for neutralisation. What is the concentration of the sulfuric acid?

Step 1: the equation

$$
2 \mathrm{NaOH}+\mathrm{H}_{2} \mathrm{SO}_{4} \rightarrow \mathrm{Na}_{2} \mathrm{SO}_{4}+2 \mathrm{H}_{2} \mathrm{O}
$$

Step 2; the ratios

$$
2: 1
$$

Step 3: how many moles of sodium hydroxide $\quad 27.40 \mathrm{~cm}^{3}=0.0274 \mathrm{dm}^{3}$
number of moles $=c \times v=0.100 \times 0.0274=0.00274$ moles
step 4: Using the ratio, how many moles of sulfuric acid
for every 2 NaOH there are $1 \mathrm{H}_{2} \mathrm{SO}_{4}$ so, we must have $0.00274 / 2=0.00137$ moles of $\mathrm{H}_{2} \mathrm{SO}_{4}$
Step 5: Calculate concentration. concentration $=$ moles $/$ volume $\leftarrow$ in $\mathrm{dm}^{3}=0.00137 / 0.025=\mathbf{0 . 0 5 4 8} \mathrm{moldm}^{-\mathbf{3}}$
Here are some additional problems, which are harder, ignore the questions about colour changes of indicators.
http://bit.ly/pix|chem12
http://www.docbrown.info/page06/Mtestsnotes/ExtraVolCalcs1.htm
Use the steps on the last page to help you

Q8.1 A solution of barium nitrate will react with a solution of sodium sulfate to produce a precipitate of barium sulfate.
$\mathrm{Ba}\left(\mathrm{NO}_{3}\right)_{2}(\mathrm{aq})+\mathrm{Na}_{2} \mathrm{SO}_{4}(\mathrm{aq}) \rightarrow \mathrm{BaSO}_{4}(\mathrm{~s})+2 \mathrm{NaNO}_{3}(\mathrm{aq})$
What volume of $0.25 \mathrm{moldm}^{-3}$ sodium sulfate solution would be needed to precipitate all of the barium from $12.5 \mathrm{~cm}^{3}$ of $0.15 \mathrm{moldm}^{-3}$ barium nitrate?

## Chemistry topic 9 - Organic chemistry - functional groups

At GCSE you would have come across hydrocarbons such as alkanes (ethane etc) and alkenes (ethene etc). You may have come across molecules such as alcohols and carboxylic acids. At A level you will learn about a wide range of molecules that have had atoms added to the carbon chain. These are called functional groups, they give the molecule certain physical and chemical properties that can make them incredibly useful to us.

Here you are going to meet a selection of the functional groups, learn a little about their properties and how we give them logical names.

You will find a menu for organic compounds here:
http://bit.ly/pixlchem13

http://www.chemguide.co.uk/orgpropsmenu.html\#top
partners in excellence

And how to name organic compounds here:

## http://www.chemguide.co.uk/basicorg/conventions/names.html\#top

Using the two links see if you can answer the following questions:
Q9.1 Halogenoalkanes
What is the name of this halogenoalkane?

How could you make it from butan-1-ol?

## Q9.2 Alcohols

How could you make ethanol from ethene?
How does ethanol react with sodium, in what ways is this a) similar to the reaction with water, b) different to the reaction with water?

## Q9.3 Aldehydes and ketones

Draw the structures of a) propanal b) propanone
How are these two functional groups different?

## Chemistry topic 10 - Acids, bases, pH

At GCSE you will know that an acid can dissolve in water to produce $\mathrm{H}^{+}$ions, at A level you will need a greater understanding of what an acid or a base is.

Read the following page and answer the questions

## http://bit.ly/pixlchem15

http://www.chemguide.co.uk/physical/acidbaseeqia/theories.html\#top

Q10.1 What is your new definition of what an acid is?
Q10.2 How does ammonia $\left(\mathrm{NH}_{3}\right)$ act as a base?

## http://bit.ly/pixlchem16

http://www.chemguide.co.uk/physical/acidbaseeqia/acids.html\#top
Q10.3 Ethanoic acid (vinegar) is a weak acid, what does this mean?
Q10.4 What is the pH of a solution of 0.01 moldm $^{-3}$ of the strong acid, hydrochloric acid?
partners in excellence

## Pre-Knowledge Topics Answers to problems

Q1.1a) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2}$
b) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{1}$
c) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{4}$
d) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{5}$
e) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6}$
f) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{6} 4 s^{2}$
g) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{3} 4 s^{2}$
h) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{8} 4 s^{2}$
i) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{10} 4 s^{1}$
j) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{10} 4 s^{2}$
k) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{10} 4 p^{3}$
Q1.2a) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6}$
b) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6}$
c) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{10}$
d) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6}$
e) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{7}$
Q2.1 a) +4
b) +6
c) +5
d) +4
e) +3
f) +5
g) +7
h) +6
i) +4

Q3.1 They must be ionised / turned into ions
Q3.2 The ions are all given the same amount of kinetic energy, as $K E=1 / 2 \mathrm{mv}^{2}$ the lighter ions will have greater speed / heavier ions will have less speed.
Q3.3
a) 121.855
b) 67.796
c) 107.973
d) 204.41
e) $87.710 / 87.7102$

Q4.1
a)

$120^{\circ}$
b)

$107^{\circ}$
c)

$109.5^{\circ}$

Q5a. $2 \mathrm{H}_{2}+\mathrm{O}_{2} \rightarrow 2 \mathrm{H}_{2} \mathrm{O}$
b. $\mathrm{S}_{8}+1202 \rightarrow 8 \mathrm{SO}_{3}$
c. $2 \mathrm{HgO} \rightarrow 2 \mathrm{Hg}+\mathrm{O}_{2}$
d. $\mathrm{Zn}+2 \mathrm{HCl} \rightarrow \quad \mathrm{ZnCl}_{2}+\mathrm{H}_{2}$
e. $2 \mathrm{Na}+2 \mathrm{H}_{2} \mathrm{O} \rightarrow 2 \mathrm{NaOH}+\mathrm{H}_{2}$
f. $\mathrm{C}_{10} \mathrm{H}_{16}+8 \mathrm{Cl}_{2} \rightarrow \quad 10 \mathrm{C}+16 \mathrm{HCl}$
g. $2 \mathrm{Fe}+3 \mathrm{O}_{2} \rightarrow \quad 2 \mathrm{Fe}_{2} \mathrm{O}_{3}$
h. $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}+6 \mathrm{O}_{2} \rightarrow \quad 6 \mathrm{CO}_{2}+6 \mathrm{H}_{2} \mathrm{O}$
i. $\mathrm{Fe}_{2} \mathrm{O}_{3}+3 \mathrm{H}_{2} \rightarrow 2 \mathrm{Fe}+3 \mathrm{H}_{2} \mathrm{O}$
j. $2 \mathrm{Al}+3 \mathrm{FeO} \rightarrow \mathrm{Al}_{2} \mathrm{O}_{3}+3 \mathrm{Fe}$
partners in excellence

Q6.1
a) $85.2 / 284=0.3$ moles
b) $73.56 / 122.6=0.6$ moles
c) $249.5 / 249.5=1.0$ moles
d) $0.125 \times 212.8=26.6 \mathrm{~g}$
e) $2 \mathrm{Mg}: 20$ or 1:1 ratio
2.4 g of $\mathrm{Mg}=0.1$ moles so we need 0.1 moles of oxygen $\left(\mathrm{O}_{2}\right): 0.1 \times 32=3.2 \mathrm{~g}$
7.1 a) $9.53 \mathrm{~g} / 95.3=0.1$ moles, in $100 \mathrm{~cm}^{3}$ or $0.1 \mathrm{dm}^{3}$ in $1 \mathrm{dm}^{3} 0.1 \mathrm{moles} / 0.1 \mathrm{dm}^{3}=1.0 \mathrm{~mol} \mathrm{dm}^{-3}$
b) $13.284 \mathrm{~g} / 331.2=0.04$ moles, in $2 \mathrm{dm}^{3} \quad$ in $1 \mathrm{dm}^{3} 0.04 \mathrm{moles} / 2 \mathrm{dm}^{3}=0.02 \mathrm{~mol} \mathrm{dm}^{-3}$
c) $100 \mathrm{~cm}^{3}$ of $0.1 \mathrm{~mol} \mathrm{dm}^{-3}=0.01$ moles added to a total volume of $2 \mathrm{dm}^{3}=0.01 \mathrm{moles} / 2 \mathrm{dm}^{3}=0.005 \mathrm{~mol} \mathrm{dm}^{-3}$
d) in $1 \mathrm{dm}^{3}$ of $1 \mathrm{~mol} \mathrm{dm}^{-3}$ silver nitrate, 1 mole of $\mathrm{Ag}=107.9 \mathrm{~g}$ in $0.1 \mathrm{dm}^{3}=107.9 \times 0.1=10.79 \mathrm{~g}$
e) $0.0526 \times 79.7=42.0274 \mathrm{~g}$
8.1
$\mathrm{Ba}\left(\mathrm{NO}_{3}\right)_{2}: \mathrm{Na}_{2} \mathrm{SO}_{4}$
1 : 1 ratio
$12.5 \mathrm{~cm}^{3}$ of $\mathrm{Ba}\left(\mathrm{NO}_{3}\right)_{2}=0.0125 \mathrm{dm}^{3}$
$0.15 \mathrm{moldm}^{-3} \times 0.0125 \mathrm{dm}^{3}=0.001875$ moles
same number of moles of sodium sulfate needed, which has a concentration of $0.25 \mathrm{~mol} \mathrm{dm}^{-3}$
0.001875 moles $/ 0.25 \mathrm{~mol} \mathrm{dm}^{-3}=0.0075 \mathrm{dm}^{3}$ or $7.5 \mathrm{~cm}^{3}$
9.1 1-chlorobutane

Add butan-1-ol to concentrated HCl and shake
9.2 react ethene with hydrogen gas at high temperature and pressure with a nickel catalyst

The reaction is similar in that it releases hydrogen but different as it proceeds much slower than in water
9.3
propanal
propanone

The carbon atom joined to oxygen in propanal has a hydrogen attached to it, it does not in propanone.
10.1 An acid is a proton donor
10.2 Ammonia can accept a proton, to become $\mathrm{NH}_{4}{ }^{+}$
10.3 ethanoic acid has not fully dissociated, it has not released all of its hydrogen ions into the solution.
$\mathrm{CH}_{3} \mathrm{COOH} \leftrightharpoons \mathrm{CH}_{3} \mathrm{COO}^{-}+\mathrm{H}^{+}$
Mostly this Very few of these
$10.4 \mathrm{pH}=-\log [0.01]=2 \quad$ The $\mathrm{pH}=2$

## Places to visit

1. Go outdoors!

Have you actually spent any time observing the geology of the area you live in? What rocks or minerals are found in your area? Does your area have a history of extracting minerals? If so what were they, what were they used for, how did they obtain them? Are there any working or remains of mineral extraction industries?
2. Are there any chemical or chemistry based businesses in your area? A big ask, but one that could be really beneficial to you, write them a letter explaining that you are taking A level chemistry and you want to see how chemistry is used in industry and you would like to visit / have some work experience. You never know this could lead to great things!!!!
3. You could also try writing to / searching for your nearest university to see if they are running any summer schools for chemistry - they are usually free and give you the opportunity to experience the laboratories in a university.
4. Science museums.

You could visit your nearest science museum. They often have special exhibitions that may be of interest to you.
https://en.wikipedia.org/wiki/List of science museums\#United Kingdom
5. Somerset Earth Science Centre:
http://www.earthsciencecentre.org.uk
6. The UK Association for Science and Discovery Centres (ASDC)

This association brings together over 60 major science engagement organisations in the UK.
http://sciencecentres.org.uk/centres/weblinks.php

Chemistry A level transition - baseline assessment.
40 marks
All data is given on this paper, you will not need a periodic table
Answer all questions.

1. Here is part of a periodic table, use it to answer the following questions

| ${ }_{5}^{10.8}$ | ${ }_{6}^{12.0} \mathrm{C}$ | ${ }_{7}^{14.0} \mathbf{N}$ <br> nitrogen | $\begin{array}{r} 16.0 \\ 8 \end{array}$ <br> oxygen | $\underset{\substack{9 \\ \text { fluorine }}}{19.0}$ | ${ }_{\substack{10 \\ \text { neon }}}^{20.2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ${ }_{13}^{27.0} \mathrm{Al}$ aluminium | $\underset{\substack{14 \\ \text { silicon }}}{28.1}$ | $\begin{array}{\|c\|} \hline{ }_{15}^{31.0} \mathbf{P} \\ \text { phosphorus } \end{array}$ | ${ }_{16}^{32.1} \mathrm{~S}$ | 35.5 <br> ${ }_{17} \mathrm{Cl}$ <br> chlorine | 39.9 <br> ${ }_{18} \mathrm{Ar}$ <br> argon |

a. Which is the correct electron configuration for a nitrogen atom, circle the correct answer
[1]
$1 s^{2} 2 p^{5}$
$1 s^{1} 2 p^{6}$
$1 s^{2} 2 s^{2} 2 p^{3}$
$1 s^{2} 2 s^{5}$
$1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{2}$
b. Which is the correct electron configuration for a chlorine atom, circle the correct answer
[1]
$1 s^{2} 2 s^{8} 2 p^{7} \quad 1 s^{2} 2 s^{2} 2 p^{8} 2 d^{5} \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 d^{7} \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 p^{7} \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{5}$
c. Which is the correct electron configuration for an aluminium ion, $\mathrm{Al}^{3+}$ ? Circle the correct answer
$1 s^{2} 2 s^{2} 2 p^{6} \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{3} \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} \quad 1 s^{2} 2 s^{2} 2 p^{6} 2 d^{1}$
2. Draw a dot and cross diagram to show the bonding in a molecule of water, $\mathrm{H}_{2} \mathrm{O}$.

Atomic numbers: $\mathrm{H}=1, \mathrm{O}=8$
3. A time of flight mass spectrometer has 4 main stages. put the correct stage in the diagram below:

Drift region Ionisation Detector Acceleration

4. A mass spectrometer was used to analyse a sample of chlorine; the results of the analysis are as follows:

| isotope mass | \% of <br> sample |
| :---: | :---: |
| $\mathrm{Cl}-35$ | 75.53 |
| $\mathrm{Cl}-37$ | 24.47 |

Calculate the accurate atomic mass of chlorine. Give your answer to $\mathbf{3}$ decimal places.
mass: $\qquad$
5. Give the oxidation state of the underlined atom in the following chemicals.

Useful information: $\mathrm{H}=+1, \mathrm{~K}=+1, \mathrm{Na}=+1, \mathrm{Mg}=+2, \mathrm{O}=-2, \mathrm{Cl}=-1$
a) $\mathrm{CO}_{2}$
b) $\mathrm{SO}_{3}$
c) $\mathrm{H}_{2} \mathrm{SO}_{4}$
d) $\mathrm{AlCl}_{3}$
e) $\mathrm{Cr}_{2} \mathrm{O}_{3}$
f) $\mathrm{NaNO}_{3}$
g) $\underline{\mathrm{VCl}} 4$
6. Balance the following chemical equations:
a) $\mathrm{C}_{3} \mathrm{H}_{8}+$ $\qquad$ $\mathrm{O}_{2} \rightarrow$ $\qquad$ $\mathrm{CO}_{2}+$ $\qquad$ $\mathrm{H}_{2} \mathrm{O}$
b) $\qquad$ $\mathrm{HCl}+\mathrm{Mg}(\mathrm{OH})_{2} \rightarrow \mathrm{MgCl}_{2}+$ $\qquad$ $\mathrm{H}_{2} \mathrm{O}$
c) $\mathrm{Na}_{2} \mathrm{CO}_{3}+$ $\qquad$ $\mathrm{HCl} \rightarrow$ $\qquad$ $\mathrm{NaCl}+$ $\qquad$ $\mathrm{H}_{2} \mathrm{O}+\mathrm{CO}_{2}$
7. Calculate the relative formula masses of the following:

Atomic masses: $\mathrm{H}=1, \mathrm{O}=16, \mathrm{~S}=32.1, \mathrm{C}=12, \mathrm{Ca}=40.1, \mathrm{Na}=23, \mathrm{Cl}=35.5, \mathrm{Zn}=65.4$
a) $\mathrm{CaCl}_{2}$
b) $\mathrm{H}_{2} \mathrm{CO}_{3}$
c) $\mathrm{Na}_{2} \mathrm{SO}_{4}$
d) $\mathrm{C}_{3} \mathrm{H}_{7} \mathrm{OH}$
e) $\mathrm{Zn}\left(\mathrm{NO}_{3}\right)_{2}$
8. A student carried out a reaction with this molecule:

a. What is the name of this molecule? $\qquad$ [2]
partners in excellence
9. Vinegar is a solution of ethanoic acid $\left(\mathrm{CH}_{3} \mathrm{COOH}\right)$ in water. A student carried out a titration of a sample of vinegar.
He used a pipette to measure exactly $25.0 \mathrm{~cm}^{3}$ of vinegar into a flask, added an indicator and titrated it with a $1.00 \mathrm{~mol} \mathrm{dm}^{-3}$ solution of sodium hydroxide ( NaOH ).
The reaction is:

$$
\mathrm{CH}_{3} \mathrm{COOH}+\mathrm{NaOH} \rightarrow \mathrm{CH}_{3} \mathrm{COONa}+\mathrm{H}_{2} \mathrm{O}
$$

The student found that his average titration was $27.50 \mathrm{~cm}^{3}$

$$
\left.\begin{array}{l}
\mathrm{c}=\mathrm{n} / \mathrm{v} \quad \mathrm{c}=\text { concentration }(\mathrm{mol} \mathrm{dm} \\
\mathrm{n}
\end{array}\right), \mathrm{n}=\text { number of moles, } \mathrm{v}=\mathrm{volume}\left(\mathrm{dm}^{3}\right)
$$

a. Using the chemical equation, how many moles of sodium hydroxide will react with 1 mole of ethanoic acid?
$\qquad$ moles
b. How many moles of sodium hydroxide are in $27.50 \mathrm{~cm}^{3}$ of $1.00 \mathrm{moldm}^{-3}$ sodium hydroxide?
$\qquad$ moles
[2]
c. How many moles of ethanoic acid are in $25.0 \mathrm{~cm}^{3}$ of the vinegar sample?
$\qquad$ moles
[1]
d. How many moles of ethanoic acid are in $1 \mathrm{dm}^{3}$ of vinegar?
$\qquad$ moles
[1]
e. Ethanoic acid has a formula mass of 48 . What mass of ethanoic acid is present in $1 \mathrm{dm}^{3}$ of vinegar?
partners in excellence

## Chemistry A level transition - baseline assessment. - Answers

1. 

a. Which is the correct electron configuration for a nitrogen atom, circle the correct answer
[1]

b. Which is the correct electron configuration for a chlorine atom, circle the correct answer

c. Which is the correct electron configuration for an aluminium ion, $\mathrm{Al}^{3+}$ ? Circle the correct answer
$1 s^{2} 2 s^{2} 2 p^{6} \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{3} \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} \quad 1 s^{2} 2 s^{2} 2 p^{6} 2 d^{1}$
2. Draw a dot and cross diagram to show the bonding in a molecule of water, $\mathrm{H}_{2} \mathrm{O}$.

Atomic numbers: $\mathrm{H}=1, \mathrm{O}=8$

1 mark for 2 x shared electrons
1 mark for lone pairs

3. A time of flight mass spectrometer has 4 main stages. put the correct stage in the diagram below:

4. A mass spectrometer was used to analyse a sample of chlorine, the results of the analysis are as follows:

| isotope mass | $\%$ of <br> sample |
| :---: | :---: |
| $\mathrm{Cl}-35$ | 75.53 |
| $\mathrm{Cl}-37$ | 24.47 |

$(35 \times 75.53)+(37 \times 24.47) / 100[1]$
$=35.4894$ [1]
To 3dp $=35.489$ [1] [2 marks if
above line is missing]
partners in excellence
5. Give the oxidation state of the underlined atom in the following chemicals. Useful information: $\mathrm{H}=+1, \mathrm{~K}=+1, \mathrm{Na}=+1, \mathrm{Mg}=+2, \mathrm{O}=-2, \mathrm{Cl}=-1$
a) $\mathrm{CO}_{2} \quad+4$
b) $\mathrm{SO}_{3}+6$
c) $\mathrm{H}_{2} \mathrm{SO}_{4}+6$
d) $\mathrm{AlCl}_{3}+3$
e) $\mathrm{Cr}_{2} \mathrm{O}_{3}+3$
f) $\mathrm{NaNO}_{3}+5$
g) $\underline{\mathrm{VCl}} 44+4$
6. Balance the following chemical equations:
a) $\mathrm{C}_{3} \mathrm{H}_{8}+\__{-}^{5} \mathrm{O}_{2} \rightarrow$ _3_ $\mathrm{CO}_{2}+{ }_{-}$_ $_{-} \mathrm{H}_{2} \mathrm{O}$
b) $\__{2} \_^{\mathrm{HCl}}+\mathrm{Mg}(\mathrm{OH})_{2} \rightarrow \mathrm{MgCl}_{2}+\__{2} \mathrm{H}_{2} \mathrm{O}$
c) $\mathrm{Na}_{2} \mathrm{CO}_{3}+{ }_{2} \__{-} \mathrm{HCl} \rightarrow$ _2_ $\mathrm{NaCl}+\_1 \_\mathrm{H}_{2} \mathrm{O}+\mathrm{CO}_{2}$
7. Calculate the relative formula masses of the following:

Atomic masses: $\mathrm{H}=1, \mathrm{O}=16, \mathrm{~S}=32.1, \mathrm{C}=12, \mathrm{Ca}=40.1, \mathrm{Na}=23, \mathrm{Cl}=35.5$
a) $\mathrm{CaCl}_{2}$
b) $\mathrm{H}_{2} \mathrm{CO}_{3}$
111.1
62
c) $\mathrm{Na}_{2} \mathrm{SO}_{4}$
142.3
d) $\mathrm{C}_{3} \mathrm{H}_{7} \mathrm{OH}$
60
e) $\mathrm{Zn}\left(\mathrm{NO}_{3}\right)_{2}$ 189.4
[5]
8. A student carried out a reaction with this molecule:

a. What is the name of this molecule? pentan-1-ol

$$
\text { Pentanol = } 1 \text { mark } \quad \text { pentan-1-ol }=2 \text { marks }
$$

9. 

a. Using the chemical equation, how many moles of sodium hydroxide will react with 1 mole of ethanoic acid?
$\qquad$
1 $\qquad$ moles
b. How many moles of sodium hydroxide are in $27.50 \mathrm{~cm}^{3}$ of $1.00 \mathrm{moldm}^{-3}$ sodium hydroxide? 27.5/1000
[1] $\times 1.00=0.0275$ [1]

$$
0.0275 \text { [2] moles }
$$

c. How many moles of ethanoic acid are in $25.0 \mathrm{~cm}^{3}$ of the vinegar sample?
$\qquad$
d. How many moles of ethanoic acid are in $1 \mathrm{dm}^{3}$ of vinegar?
$0.0275 \times 1000 / 25=1.10$
$\qquad$
1.10 $\qquad$ moles
e. Ethanoic acid has a formula mass of 48. What mass of ethanoic acid is present in $1 \mathrm{dm}^{3}$ of vinegar?
$1.1 \times 48=52.8 \mathrm{~g}$
$\qquad$ [1]
